New chess problems

This time there are no orthodox helpmates in 2, but there are a couple of not very exotic unorthodox problems of this length. Grasshoppers hop on Q-lines over one piece of either colour to the square immediately beyond; and kangaroos do exactly the same except that two intervening pieces are required. In Circe, captured pieces (not Ks) reappear on their game array squares, pawns on the file of capture and pieces according to the colour of the capture square. Although some of the problems here have themes in common, there are also a few items which may surprise people who know my usual style.

Best wishes to all readers. I hope to be with you again by the New Year.
